

Husqvarna®

Operator's manual

TS 250 XL3

Please read the operator's manual carefully and make sure you understand the instructions before using the machine.

GB

EVERY MACHINE IS THOROUGHLY TESTED BEFORE LEAVING THE FACTORY. EACH MACHINE IS SUPPLIED WITH A COPY OF THIS MANUAL. OPERATORS OF THIS EQUIPMENT MUST READ AND BE FAMILIAR WITH THE SAFETY WARNINGS. FAILURE TO OBEY WARNINGS MAY RESULT IN INJURY OR DEATH. FOLLOW INSTRUCTIONS STRICTLY TO ENSURE LONG SERVICE IN NORMAL OPERATION.

DUST WARNING

Cutting, especially when DRY cutting, generates dust that comes from the material being cut, which frequently contains silica. Silica is a basic component of sand, quartz, brick clay, granite and numerous other minerals and rocks. Exposure to excessive amount of such dust can cause:

- Respiratory diseases (affecting your ability to breath), including chronic bronchitis, silicosis and pulmonary fibrosis from exposure to silica. These diseases may be fatal;
- Skin irritation and rash; and
- Cancer according to NTP* and IARC*

* National Toxicology Program, International Agency for Research on Cancer

Take precautionary steps

- Avoid inhalation of and skin contact with dust, mist and fumes;
- Wet cut when feasible, to minimize dust;
- Wear and ensure that all bystanders wear appropriate respiratory protection such as dust masks designed to filter out microscopic particles. (See OSHA 29 CFR Part 1910.1200)

California Prop 65 Warning:

Use of this product can cause exposure to materials known to the State of California to cause cancer and/or birth defects or other reproductive harm.

SAFETY FIRST!

WARNING: FAILURE TO COMPLY WITH THESE WARNINGS AND OPERATING INSTRUCTIONS COULD RESULT IN DEATH OR SERIOUS BODILY INJURY.

DO

- DO read this entire operator's manual before operating this machine. Understand all warnings, instructions, and controls.
- DO keep all guards in place and in good condition.
- DO wear safety approved hearing, eye, head and respiratory protection.
- DO read and understand all warnings and instructions on the machine.
- DO read and understand the symbol definitions contained in this manual.
- DO keep all parts of your body away from the blade and all other moving parts.
- DO know how to stop the machine quickly in case of emergency.
- DO turn the "ON/OFF" switch to the "OFF" position prior to connecting the machine to the power source.
- DO inspect the blade, flanges and shafts for damage before installing the blade.
- DO use the blade flange size shown for each blade size.
- DO use only the blade flanges supplied with the saw. Never use damaged or worn blade flanges.
- DO use only blades marked with a maximum operating speed greater than the blade shaft speed. Verify speed by checking blade shaft rpm and pulley diameters and blade flange diameters.
- DO verify saw drive configuration by checking blade shaft RPM, pulley diameters, and blade flange diameter.
- DO read all safety materials and instructions that accompany any blade used with this machine.
- DO inspect each blade carefully before using it. If there are any signs of damage or unusual wear, **DO NOT USE THE BLADE.**
- DO mount the blade solidly and firmly. Wrench tighten the arbor nut.
- DO make sure the blade and flanges are clean and free of dirt and debris before mounting the blade on the saw.
- DO use the correct blade for the type of work being done. Check with blade manufacturer if you do not know if blade is correct.
- DO use caution and follow the instructions when loading and unloading the machine.
- DO operate this machine only in well ventilated areas.
- DO instruct bystanders on where to stand while the machine is in operation.
- DO establish a training program for all operators of this machine.
- DO clear the work area of unnecessary people. Never allow anyone to stand in front of or behind the blade while the motor is running.
- DO make sure the blade is not contacting anything before starting the motor.
- DO use caution when lifting and transporting this machine.
- DO always tie down the machine when transporting.
- DO use caution and follow instructions when setting up or transporting the machine.
- DO have all service performed by competent service personnel.
- DO make sure electric powered machines are plugged into a properly grounded circuit.
- DO make sure power cords are the proper size and in good condition.
- DO maintain a secure grip on the material being cut.
- DO clean the water tray frequently.
- DO verify the blade arbor hole matches the machine spindle before mounting the blade.
- DO clean the machine after each day's use.
- DO follow all electrical codes in your area.
- DO consider work area environment. Don't expose power tools to rain. Don't use power tools in wet locations.
- DO use caution to guard against electric shock. Prevent body contact with grounded surfaces (i.e., pipes, radiators, ranges, refrigerators).
- DO use correct voltage and proper extension cords. Never carry tool by cord or yank it to disconnect it from receptacle. Keep cord away from heat, oil and sharp edges.
- DO always carry the machine with the motor stopped.
- DO disconnect tools from power source when not in use, before servicing and when changing accessories.
- DO carefully maintain and clean for better and safer performance. Follow instructions for changing accessories. Inspect tool cords periodically and, if damaged, have repaired by authorized service facility.
- DO only cut in a straight line.
- DO only saw as deep as the job specifications require.
- DO always give a copy of this manual to the equipment user. If you need extra copies, call TOLL FREE 1-800-288-5040.

SAFETY FIRST!

WARNINGS DO's AND DO NOT's

WARNING: FAILURE TO COMPLY WITH THESE WARNINGS AND OPERATING INSTRUCTIONS COULD RESULT IN DEATH OR SERIOUS BODILY INJURY.

DO NOT

- DO NOT** operate this machine unless you have read and understood this operator's manual.
- DO NOT** operate this machine without the blade guard, or other protective guards in place.
- DO NOT** stand behind or in front of the blade path while the motor is running.
- DO NOT** leave this machine unattended while the motor is running.
- DO NOT** operate this machine when you are tired or fatigued.
- DO NOT** use a wet blade without adequate water supply to the blade.
- DO NOT** exceed maximum blade speed shown for each blade size. Excessive speed could result in blade breakage.
- DO NOT** operate the machine if you are uncertain of how to run the machine.
- DO NOT** use damaged equipment or blades.
- DO NOT** touch or try to stop a moving blade with your hand.
- DO NOT** cock, jam, wedge or twist the blade in a cut.
- DO NOT** transport a cutting machine with the blade mounted on the machine.
- DO NOT** use a blade that has been dropped or damaged.
- DO NOT** use carbide tipped blades.
- DO NOT** use abrasive blades.
- DO NOT** use conventional abrasive blades with water.
- DO NOT** touch a dry cutting diamond blade immediately after use. These blades require several minutes to cool after each cut.
- DO NOT** use damaged or worn blade flanges.
- DO NOT** allow other persons to be near the machine when starting or when the machine is in operation.
- DO NOT** operate this machine in an enclosed area unless it is properly vented.
- DO NOT** operate this machine in the vicinity of anything that is flammable. Sparks could cause a fire or an explosion.
- DO NOT** allow blade exposure from the guard to be more than 180 degrees.
- DO NOT** operate this machine with the belt guard or blade guard removed.
- DO NOT** operate this machine unless you are specifically trained to do so.
- DO NOT** use a blade that has been over heated (Core has a bluish color).
- DO NOT** jam material into the blade.
- DO NOT** grind on the side of the blade.
- DO NOT** lay power cords in or near the water.
- DO NOT** replace the motor with any motor that does not have a special grounding connection.
- DO NOT** cut deeper than 1" per pass with a dry blade. Step out to achieve deeper cuts.
- DO NOT** start cutting with a saw until you have a clear work area and secure footing.
- DO NOT** operate this machine while using drugs or alcohol.

This saw was designed for certain applications only. **DO NOT** modify this saw or use for any application other than for which it was designed. If you have any questions relative to its application, **DO NOT** use the saw until you have written Husqvarna Construction Products and we have advised you.

Major Assemblies in Shipping Carton

1. Cutting Head Assembly: Includes Water Tube Assembly (L)}
2. Frame Assembly
3. Water Pan Assembly
4. Conveyor Cart Assembly (4) with Rip Fence (S) included.
5. Water Pump and Accessory Carton: Includes Water Pump (H), Hose Barb (J), Water Valve (K), 15/16"-9/16"-1/2" Wrench (E), Drain Plug (C), Locking Knob (F) with 5/16" Flatwashers, Bearing Caps (D) w/ 5/16" Fasteners.
6. Literature Envelope - Important to open and read thoroughly.

FIGURE 2

INSTRUCTION
INDICATION
INFORMATION

WARNING

PROHIBITION

These signs will give
advice for your safety

Before leaving our factory every machine is thoroughly tested.

Follow our instructions strictly and your machine will give you long service in normal operating conditions.

1

Features

Use: Sawing of any kind of tile, up to 31" (787mm).
Diagonal on 22" x 22" (559 x 559mm) tile.

Tools: Rip Guide comes standard on all tile saws.
See **Tile Cutting Accessories** on page 19.

(For information or availability of other accessories contact your Husqvarna supplier.)

Blade Capacity: Rim Ø 10" (254mm) - bore 5/8" (15,9mm).

Profile Wheel: Rim Ø 6" (152mm) - bore 5/8" (15,9mm).

Blade Rotation: Counter-Clockwise (CCW).

Depth of Cut: 3-3/4" (95mm) with 10" (254mm) blade.

Horsepower:	1-1/2	1-1/2
Voltage:	115	115/230
Hertz:	60	60
F.L. Amperages:	14.6	17.2/8.6

Blade Shaft RPM: 2760 3880

Weight: lb. (kg.) 105 (48) 110 (50)

Dimensions - L x W x H: in 51-1/4" x 26-7/16" x 22-5/4"

(mm) (1,302 x 671 x 575)

Conveyor Cart - L x W: in (mm) 16 x 16-1/2" (406 x 419)

Pan Holding Capacity: 12 gallons (46.1 liters)

Water Pump Output: 100 gal/hr. (378 l/hr.) Standard
300 gal/hr. (1135 l/hr.) Optional

The operator must wear
protective clothing
appropriate to the work he
is doing.

Any persons not involved in the work should
leave the area.

Use only blades marked with a maximum
operating speed greater than the blade shaft
speed.

Before starting up the machine, make sure
you read this entire manual and are familiar
with the operation of this machine.

The working area must be completely clear,
well lit and all safety hazards removed.

2

Benefits

- The new, improved blade guard offers simplified blade installation and removal - maximum 10" (254mm) blade capacity. The external water tube assembly (L) is removable for easy maintenance.
- 1-1/2 HP, High Torque (HT) 115V/60/1 motor on standard saw.
- The dependable, high volume, submersible coolant pump features a screened intake.
- The motor and pump power cords are securely mounted directly into the motor housing.
- The removable Drain Plug (C) at the front end of the pan permits easy coolant draining and quick sludge clean out. The Water Pan (2) is removable for easy cleaning.
- The free-rolling Conveyor Cart (4) is aligned for straight, smooth cuts. The Backstop with ruler allows fast mounting and adjustment of the Rip Fence (S) and optional accessories. The Cart comes standard with a 5-1/4" end Extension for supporting longer tile.
- Makes diagonal cuts on 22" x 22" (559 x 559 mm) tile. Can make 31" (787mm) rip cuts.
- Full-size belt shield and belt protection.
- The adjustable Water Pan (2) allows the operator to cut tile comfortably with a full view and control of work

3

Machine Set-Up

See Figure 1

- Remove all items from the shipping carton and identify:
 - Cutting Head Assembly (1): Includes Water Tube Assembly (L)
 - Frame Assembly (1) with Lockbar (G) & Sprig-assisted Plunge Assembly.
 - Water Pan Assembly (2)
 - Conveyor Cart Assembly {Cart Assembly (4) and Rip Guide (S)}
 - Water Pump and Accessory Carton: Includes Water Pump (H), Hose Barb (J), Water Valve (K), 15/16" Wrench (E), Drain Plug (C), Locking Knob (F) with 5/16" flatwasher, Bearing Caps (D) with 5/16" Capscrews & Flatwashers.
 - Literature Assembly Envelope

NOTE: Check the carton and all packing filler for loose parts and optional accessories (if ordered).

IF ANY PARTS ARE MISSING OR DAMAGED, PLEASE CONTACT YOUR Husqvarna CUSTOMER SERVICE FOR INSTRUCTIONS. CALL 1-800-288-5040

Tools required: Your new saw can be completely assembled with the Wrench (E) provided.

Qty	Part Number	Description	Size
1	542 16 16-41	Wrench	15/16" x 9/16" x 1/2"

- Set the Frame Assembly (1) on a flat surface or on a **Husqvarna** folding stand.
- Install the Water Pan Assembly (2) between the four Pan Guides (A) on the Frame Assembly (1). Locate the Pan (2) with the Drain Plug (B) at the operating end with the two Stops (C) located on the bottom of the Pan (2) straddling the front leg of the Frame (1). The Water Pan Assembly (2) should slide freely back and forth on the Guides (A) with little lateral movement. Adjust Guides if needed.

Install the Cutting Head Assembly (1):

1. Set the Cutting Head Assembly (3) on the pivot bar up between the Set Collar (U) and the adjustable Cutting Head Position Limiter (V). **See Figure 2.** These components have been pre-set at the factory to align the blade with the slot in the center of the cart; this is adjustable. **See Alignment Procedures**, section 8.
2. Using the 5/16" Capscrews and Lockwashers provided, install the two Bearing Caps (D) to the bottom of the Cutting Head (3). To secure the Cutting Head (3) to the pivot bar, tighten the Capscrews with a 1/2" wrench or use the Wrench (E) provided. For plunge-cutting, leave the Bearing Caps (D) free enough to allow the Cutting Head (3) limited movement up or down.
3. Insert the Locking Knob (F) with 5/16" flat-washer through the slotted Lockbar (G) into the tapped hole in the belt guard. This is used to set the cutting depth of the blade. See section 5.

Set-up with the Torsion Spring (W):

With the Cutting Head installed on the pivot bar, rotate the Torsion Spring (W) until the inside spring loop (W1) engages around the lower edge of the motor platform. Loosen the 5/16" Capscrew (X) in the spring Tension Adjuster (Y) and move it to engage the Roll Pin (Z) into the outside spring loop (W2). Set the desired tension for your plunge cutting and tighten the Capscrew (X) to secure the Tension Adjuster to the pivot bar. Use the flats on the back of the Tension Adjuster with a adjustable wrench if extra tension is needed.

Water Pump Assembly (5) Set-up:

1. Remove the Water Pump (H), Hose Barb (J), the Water Control Valve (K) and Water Tube

Assembly (L) from their carton. Thread the Hose Barb (J) on the water pump outlet, hand tighten.

2. Slide the Control Valve (K) onto the flexible plastic tubing and push the open end onto the Hose Barb (J).
3. Set the Water Pump Assembly (5) in the deep end of the pan beneath the belt guard. **Note: The water pump inlet screen must be submerged in order to properly pick up water.**
4. Place the Water Tube Assembly (L) to the back of the Blade Guard (M) and insert the two 1/4" plastic nozzles (L2) into the two Ports (N) on the side of the Blade Guard (J). Route water tubing so as to prevent interference with the Cart (4).
5. Insert the male plug into the Receptacle on the motor. The Water Pump (H) will start when the motor is turned on. For dry cutting, the water pump should be unplugged or removed to prevent damage to the pump.

NOTE: THE MOTOR WATER PUMP OUTLET IS NOT TO BE USED AS A GENERAL PURPOSE CONVENIENCE OUTLET. USE FOR CONNECTION OF THE SUPPLIED WATER PUMP ONLY.

WATER PUMP SAFETY GUIDELINES

Always plug the saw power cord into a GFCI outlet when using. If a GFCI type outlet is not available, use a plug-in type GFCI plugged into a properly grounded outlet. Do not use any temporary plug adapters.

- The water pump is equipped with a ground electrical plug, to reduce the risk of possible shock. Be sure to connect to a properly grounded type receptacle.
- Never pick the water pump up out of the water when it is plugged in.
- **DO NOT EVER** use the water pump to pump anything but water.
- Never service the pump when it is still plugged in.
- Never let the pump operate dry. It is self-cooled by pumping water. Dry use will cause the pump to fail.
- Maintain regularly and clean out debris from intake screen.
- Check the power cord for nicks or frays and never try to alter the power cord in any way.

Installation & Removal of Cutting Blade:

Always set the Motor Switch to OFF prior to mounting the blade.

Be sure you are using the correct blade for the material being cut. For example, blades are available for cutting materials such as wall tile, quarry tile, marble, slate and similarly hard materials. For the best results, always use genuine **Husqvarna** diamond blades. Contact your nearest dealer to select the correct blade for your specific cutting needs.

1. Raise the Blade Guard (M) to fully up and tighten the wing nut on the side to hold it in the raised position.
3. Remove the Arbor Nut (O) and the Outer Blade Flange (P).
4. Check the Blade (Q) for Counter Clockwise rotation (CCW) and install on the spindle shaft against the Inner Blade Flange (R).

Rotation direction is indicated by an arrow on one side of the blade. Make sure the blade contact surfaces are clean.

5. Install the Outer Flange (P) with the large diameter against the Blade (Q). Hand tighten the Arbor Nut (O) with the 15/16" Wrench (E) provided. Do not overtighten; hand tight is sufficient
6. Lower the Blade Guard (M) and retighten the wing nut to securely hold the guard down in place.

Using the Bladeshaft Lock

An easy-to-use Bladeshaft Lock system can be used to loosen the Arbor Nut (O). With one hand, push the Bladeshaft lock Lever back toward the Motor while rotating the Arbor Nut Counter Clockwise (CCW) with the 15/16" wrench until the Lock engages the Bladeshaft. The Lock will then stay engaged, preventing the Bladeshaft from turning while the Arbor Nut is removed. The Lock will spring-return to the unlocked position when Lever and Bladeshaft are released.

- Install the Drain Plug (C) into the front end of the pan and fill with clean water until inlet filter of water pump is covered. See **Features** for capacity.
- Adjust the Pan Assembly (2) to accommodate the size of the tile to be cut and to obtain the most comfortable position for the operator.
 1. When cutting smaller tiles, adjust the pan all the way to the rear. The operator has full view and control of the work with minimum stretching.
 2. For cutting intermediate sized tiles, such as 10" or 12" tile, the pan can be placed somewhere between the maximum forward and maximum rear positions.
 3. When cutting larger tiles, the pan should be moved to the maximum forward position, thus giving the operator the best and most comfortable position, even diagonal-cutting 22".
 4. When cutting smaller tile, adjust cart stop to limit cart travel. When making extra long cuts up to 31", adjust cart stop to allow for extended travel.

4

OPERATING PROCEDURE

WARNING: Read the Operating Procedure completely before operating your tile saw.

Take into account the working conditions from the health and safety point of view.

Always pay extreme care and attention to the preparation of the machine before starting.

Remove all wrenches and tools from the machine.

Always keeps blade guard in place.

- Fill the Pan (2) with enough water to fully submerge the water pump screen. It takes approximately 12 gallons (46 liters) to fill the Pan.
- Before connecting the power cord:
 - * Check the Blade Shaft Nut (O) to be sure it is tight and that the Blade (Q) rotates freely.

WARNING: Check that the ON/OFF switch is in the OFF position. Then connect the power cord to a properly grounded outlet of the correct voltage. See the decal near the power cord for power requirements. If needed, use the correct size three (3) conductor extension cord to avoid excessive voltage drop. Never use lamp cord type extensions. Refer to the Recommended Extension Cords chart below.

- Turn the switch to **ON**. The blade should turn counter-clockwise, when looking at the blade guard side. The water pump will start automatically when the motor starts. Adjustment of the water supply may be made by means of the Control Valve(K).
- Follow the blade manufacturer's recommendations for dry or wet cutting. Wet cutting blades can be damaged or destroyed without sufficient water. Only blades specifically designed for dry cutting can be used without coolant.

The water supply should be adequate, with water flowing on both sides of the blade. Keep the water clean and make certain the WATER LEVER IS ALWAYS ABOVE THE PUMP INLET. Do not run the water pump dry!! Unplug for dry cutting.

- For straight cuts, position the tile squarely against the back edge of the conveyor cart. Keep the cart clean and free of cuttings. The standard Rip Guide (S) is supplied for setting cutting lengths.
- Move the conveyor cart slowly and carefully until the blade is in contact with the tile. For best cutting, a new blade needs a chance to "break-in" or "wear-in" slightly. It may take several cuts to open (expose the diamonds) of a new or closed blade.

5 ADJUSTABLE LOCKBAR WITH DEPTH LINKING PROTECTION

FIGURE 3

A Lockbar (G) is used to set the blade depth during cutting. The Lockbar has two (2) holes at the lower end which are used in specific combination with the three holes in the Frame (1). These are used as depth-limiting settings that, if used with the correct blade diameter, will protect the rolling cart from being cut by the blade.

Refer to the chart in Figure 3 for the correct use with a 10", 8" or 6" blade.

The **TS 250 XL3** is shipped standard set-up for a 10" diameter blade. To change the setting, locate the capscrew (AA) used as the pivot, loosen and remove the Lock Nut. Set the Lockbar (G) to the proper holes for blade size. Tighten the 5/16" fasteners so that the Lockbar (G) is snug but free to pivot.

Check the setting by loosening the Knob (F) and lowering the head fully down into the table slot. The blade segment should be below the table surface, but not cutting into the table. (See also Section 10, Plunge Cutting.)

6 MANUAL THERMAL OVERLOAD

The motor is equipped with a manual overload protection reset button. If the motors overheats, the red reset button will "pop out" to open the motor circuit; stopping the motor and water pump. If this occurs, the motor ON/OFF switch must be set to OFF. After the motor cools, push in the reset button. When it stays in, the motor can be restarted.

7 RECOMMENDED EXTENSION

Good motor performance depends on proper voltage. Extension cords that are too long and/or too small in wire gauge reduce the voltage to the motor under load. Use extension cords no smaller than indicated below.

MOTOR		F.L. AMPS		50' Cord		75' Cord		100' Cord	
HP	RPM	115V	230V	115V	230V	115V	230V	115V	230V
1-1/2	1725	14.6		#12		#10		#8	
1-1/2	3450	17.2	8.6	#10	#14	#10	#14	#8	#14

8 ALIGNMENT PROCEDURES

Your tile saw is factory assembled and aligned prior to shipment to ensure accurate cuts when your saw is delivered. However, since **Husqvarna** cannot control rough handling during shipping, it is suggested that the alignment be checked. If the saw is found in need of adjustment, refer to the appropriate section(s) below.

There are two basic alignment checks for the tile saw and any adjustments made must follow these procedures to ensure that the unit functions freely.

Adjustment tools required: Carpenter's Square, two (2) 7/16" wrenches, and 5/32" hex key.

1. Check the Blade in Slot Alignment

- * The Blade (Q) should be centered in the middle slot of Conveyor Cart (4).
- * Set-up your saw as described above and move the Conveyor Cart (4) back and forth from the front to the rear of the Pan (2). If the Blade (Q) contacts either side of the slot, the Cutting Head Location Adjustment must be performed.

Cutting Head Adjustment (See Figure 1)

- * The Cutting Head Assembly (3) is positioned with the Set Collar (U) against the left side of the Motor platform and the Head Position Limiter (V) against the inside.
- * Loosen the Set Collar (5/32" hex key), the Position Limiter (9/16" wrench) and the four (4) fasteners (1/2" wrench) of the Bearing Cap (D).
- * Move the Head Assembly (3) along the Pivot Bar of the Frame (1) until the Blade (Q) is centered in the center slot. Locate the Set Collar (U) against the outside of the Motor platform again and retighten the set screw. Locate the Head Position Limiter (V) against the inside wall of the Motor platform, adjust to limit the Cutting Head movement (See **section 10**) and tighten the 3/8"-16 Bolt.
- * Check that the Blade is now in the center of the middle slot. Tighten the four (4) fasteners of the

2. Check the Parallel Alignment

- * The Conveyor Cart (4) should travel parallel to the plane of the Blade (Q).
- * Place a Square rule against the backstop of the Cart (4), lightly in contact with the Blade (Q). The blade surface should be parallel to the square; i.e., no gap between the blade and the square at either the front or back edge of the blade. Next, traverse the cart back and forth along the Rails. The blade should remain parallel to the square, staying slightly in contact with it throughout its full travel. It should not move away from the Blade nor should the Blade push the the Square away. If the either happens, the Blade (Q) will not cut straight and the Parallel Alignment must be performed.

Parallel Alignment for Sraight Cuts

The Rails determine the path the tile on the Conveyor Cart (4) travels. For a straight cut, the Cart must then travel 'Parallel' to the plane (or side surface) of the Blade. The path of the Conveyor Cart (4) must then be modified by adjusting the Rails to agin be Parallel to the side of the Blade. Slotted mounting holes in both ends of the Water Pan (2) are provided to allow for this adjustment.

Tip: Align only one Rail first; usually the Inner Rail. After one Rail is aligned the other is easily aligned using the Cart (4) as a guide. If moving the one end of the Rail is not enough to provide complete alignment, the other end can be moved in the opposite direction to provide additional Rail movement.

- * Slightly loosen all 1/4"-20 fasteners (7/16" wrenches) locating the two Rails so that both rails are free to move. Move one end of the Inner Rail until the square remains flush with the Blade while the cart is moved to and fro as described above in **Check Parallel Alignment**. Tighten the fasteners of this rail and recheck the alignment.
- * Once alignment of one Rail has been made set the second Rail parallel to the first. Traverse the Cart (4) back and forth along the rails and use it as a guide to locate the second rail parallel to the first. Tighten the remaining 1/4"-20 fasteners

9 PROFILE WHEEL SET-UP AND USE

See Figure 1

The **TS 250 XL3** is designed for use with a **Husqvarna®** 6" Profile Wheel, such as P/N 542 62 10-81* (3/8" Radius) or 542 62 10-82* (1/2" Radius).

- Raise the blade guard. Remove the spindle nut and outer flange. Remove the tile saw blade if one has been installed. (Refer to Section 5, Adjustable Lockbar, if needed)
- Install the profile wheel onto the spindle shaft up against the inner flange with the working surface to the outside.
- Secure into place by reversing the outer flange and tightening the spindle nut. Lower the Blade Guard (J) back down over the profile wheel.
- Locate the material for profiling:
 1. Set the edge of the part to be shaped parallel to the wheel.
 2. Locate the material under the wheel. Pull the Conveyor Cart (4) with the material from under the wheel to set proper cutting height.
 3. Loosen the Locking Knob (F) and lower the Cutting Head (1) so that the wheel just slightly makes contact with the material.
 4. Secure the Cutting Head (1) into position with the Locking Knob (F) for cutting.

5. **Note:** Profiling usually takes several light passes to produce the best results. Set lower each time until the desire depth has been reached.

10 PLUNGE CUTTING

See Figures 1 & 2

Spring Force Adjustment:

Spring force can be adjusted by rotating Spring Tensioner (Y). Loosen the 3/8"-16 Bolt (X) and rotate Spring Tensioner (Y) to increase or decrease Spring Force. Tighten Bolt to secure Tensioner to Pivot Shaft. It may be necessary to slightly loosen the Bearing Caps (D) for proper and smooth operation. By loosening Knob (F), Pivot Head can be raised or lowered with minimal effort, depending on Spring Force adjustment.

Limiting Cutting Head Movement:

An adjustable Head Position Limiter (V) is located on the underside of the Head platform and is used to locate the Blade in the center slot of the Cart and, along with the Lockbar, as a raise and lower Position limiter for the Cutting Head. See **Cutting Head Adjustment; section 8**.

11 MAINTENANCE PROCEDURES

Before performing any maintenance, ALWAYS place the machine on a level surface with the motor OFF and disconnect the electrical current. Let the machine cool down!!

Your **Husqvarna®** tile saw is a ruggedly constructed machine, engineered to give long, satisfactory performance. Simple daily maintenance and care will add to the life and productivity of your saw. After each day's use: **CLEAN THE MACHINE!!**

- * Turn off and unplug the saw before performing any maintenance.
- * Keep the cart top clean and free for cuttings. To clean it, flush the top surface and grooves with water.
- * Drain, clean and refill the pan frequently. Flush the coolant system with plenty of water, then drain and refill the pan.
- * If the water flow stops, check the water pump to see if the shaft and impeller turn freely. See the **WATER PUMP TROUBLE-SHOOTING PROCEDURE** section.
- * It is always good practice to clean your tile saw after each day's use. Drain the water and clean out the pan. Clean the rails. Before storing, it is good practice to wipe or spray rails with water-soluble oil (like, WD-40 or equivalent).

Entrust all repairs to your authorized dealer only.

12 WATER PUMP TROUBLE-SHOOTING PROCEDURE

If Water Stops Flowing,

1. **Stop Sawing**, then
2. **Disconnect Electrical Plug from Outlet**, then
3. **Remove the Pump**, then
4. **Back Flush**.

Back flushing is done by forcing water into the pump discharge and out through the screen. Most of the time this procedure works, and the pump can be put back into service. (See Figure below)

If the back flushing does not work, remove the screen and turn the impeller manually, looking for and rinsing out the impeller cavity of any dirt or foreign matter.

13 REPAIRS

We carry out all repairs in the shortest possible time and at the most economical prices. (See front page for address and phone numbers) Contact your authorized **Husqvarna®** dealer concerning maintenance and re-

V-Belt Tensioning with Cam Adjustment:

Always set the Motor Switch to OFF and unplug power cord before making any repairs or adjustments to your saw.

This tile saw is belt driven. The standard unit uses a 6 groove Poly-V Belt. The tension is factory set, but on occasion it may be necessary to adjust the belt especially if it is being replaced. **Again, adjust only with the saw turned off and unplugged.**

Tools needed: One 3/8" wrench, two 1/2" wrenches, one 3/8" Drive Extension x 8" or longer, and a 12" Straight Edge.

1. Remove the Belt Guard to get access to the V-Belt.
 - a. Remove two 1/4"-20 Flange Bolts (3/8" wrench) on top of Belt Guard.
 - b. Remove 5/16"-18 Bolt and Locknut (two 1/2" wrenches) on side flange of Belt Guard.
2. Loosen the four 5/16"-18 Flange Bolts (1/2" wrench) that hold the Motor to the platform.
3. Remove the Belt Guard for full access to belt and pulleys.
 - a. Remove the two 1/4"-20 Flange Bolts (3/8" wrench) from top of Guard.
 - b. Remove the 5/16"-18 fasteners (two 1/2" wrenches) from the side of Belt Guard.
4. Rotate the belt tensioning Cam (1/2" Drive Extension) to tighten the belt(s) to proper tension.
 - d. With belt tensioned, use the 12" Straight Edge to check for correct pulley alignment and tighten the engine mounting screws.
 - e. Replace the Belt Guard before operating the tile saw. Always replace any guarding before start-

14 SPARE PARTS

For quick supply of spare parts and to avoid any lost time, it is essential to quote the data on the manufacturers plate fixed to the machine and the part number(s) and description to be replaced with every order.

9	N/A	1	Sector Plate	18	542 05 01-02*	1	Support Assy, Miter Frame

RIP GUIDE: P/N 542 05 10-00* - The Rip Guide is a standard accessory supplied with every tile saw. It is used to provide a repeatable position for rip cuts until relocated. The Rip Guide clamps to the machined backstop of the conveyor cart.

ADJUSTABLE PROTRACTOR: P/N 542 05 10-10* - The Protractor can be used to rip cut known angles. The protractor clamps to the backstop.

ANGLE GUIDE : P/N 542 05 10-20* - This is a non-adjustable miter used to quickly position the tile at 45 degrees; either on the left or right side. It is often used for repeated diagonal rip cuts. The Angle Guide clamps to the backstop.

BULLNOSE MITRE GUIDE: P/N 542 05 10-30* -This is a fixed guide that positions the tile for a 45 degree miter cut. The Mitring Guide clamps to the backstop.

MITY MITRE GUIDE: P/N 542 05 01-02* - This is a 45 degree fixture that has an adjustable clamp to hold the tile while miter cutting. The Mitring Guide clamps to the backstop.

FOLDING STAND: P/N 542 05 10-41* - This stable, one piece stand brings a Husqvarna® tile saw to standing level for ease of work. The stand conveniently folds flat for storage and transporting.

The instructions for use and spare parts found in this document are for information only and are not binding. As part of our product quality improvement policy, we reserve the right to make any and all technical modifications without prior notice.

The manufacturer accepts no responsibility caused by unsuitable use or modifications.

16 24" DIAGONAL CUT CONVEYOR CART KIT

The 24" Diagonal Cut Conveyor Cart Kit provides the following key advantages:

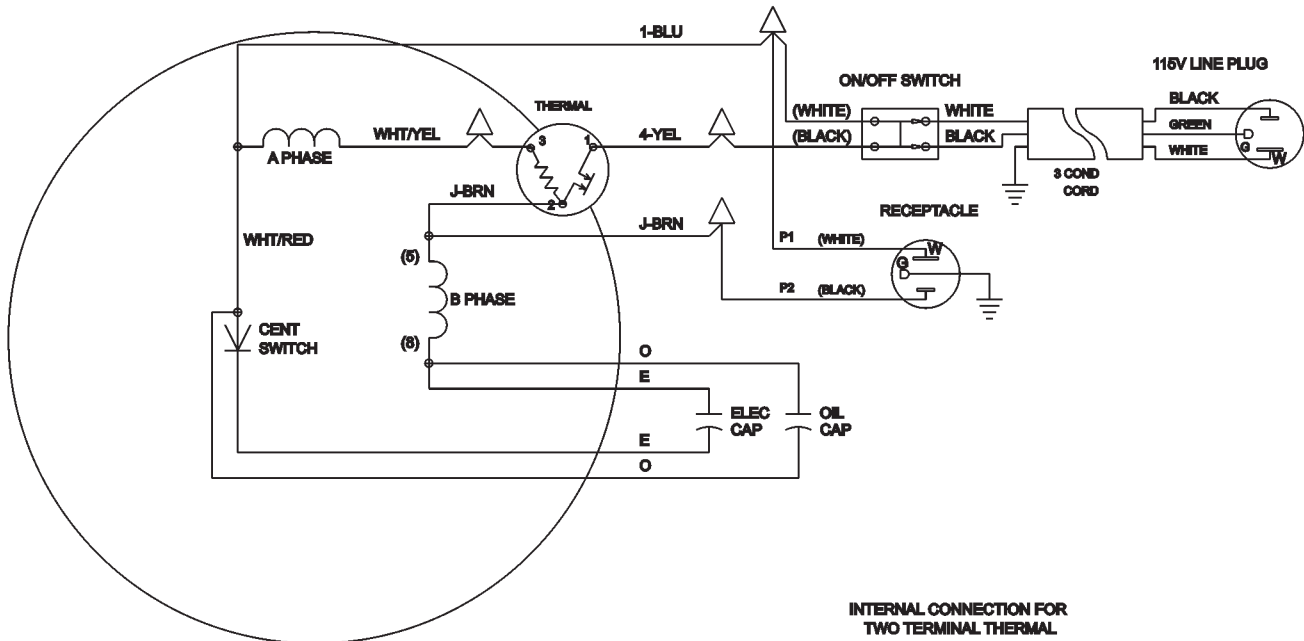

- Makes diagonal cuts on 24" x 24" (610 x 610 mm) tile.
- Can make 34" (863mm) rip cuts.
- Comes complete with stainless steel rail package to convert TS 250 XL3 for 24" cutting.
